PROFILE

Aspiring software engineer with hands-on experience building full-stack web applications (React, Django REST Framework) and data projects in Python. I have built and tested REST APIs, worked with SQL databases through the Django ORM, written automated tests with pytest, and used Git and GitHub for version control on every project. In a junior developer placement I have supported live systems, built an AI-powered Q&A tool, and worked with marketing and engineering colleagues to fix problems. Strong maths background (A Level Maths A, Further Maths B); I enjoy learning new tools quickly and explaining technical work in plain English.

WORK EXPERIENCE

Junior Developer (Unpaid Technical Placement)

Amica Connect Technologies | December 2025 – Present

- Built and maintained CRM pipelines and automated workflows in GoHighLevel, keeping customer records accurate and up to date.
- Built, tested and deployed an AI-powered Q&A agent for client enquiries, configured to answer general questions without giving medical advice; it ran live until the company decided to take it offline.
- Built landing pages and configured domains and DNS records for client-facing websites.
- Troubleshot technical issues with marketing and engineering colleagues, explaining problems and fixes in plain language.

PROJECTS

DevTrack – Full-Stack Project Tracking App

React, Vite, React Router, Axios, Django REST Framework, SQLite, Git

- Built a full-stack web app for tracking development tasks, with a React front end and a Django REST Framework back end.
- Designed REST API endpoints with input validation so bad data is rejected before it reaches the database.
- Used Django ORM aggregation queries to power a live analytics view of task progress.
- Built a Kanban-style board that moves tasks between workflow states, connected to the API with Axios.

Greater Manchester Housing and Council Tax Analysis

Python, pandas, Matplotlib, scikit-learn, Jupyter, Git/GitHub | github.com/sc-freelance/Greater-Manchester-Housing-Property-Council-Tax-Analysis

- Analysed official open data from HM Land Registry and the Valuation Office Agency for Greater Manchester's 10 boroughs.
- Filtered a national file of 90,867 property sales down to 2,964 standard Greater Manchester sales, removing changed and deleted records.
- Loaded 32 yearly snapshots of housing stock (1993 to 2024); found and fixed a bug where a combined file was double-counted, creating a 75-million-home outlier.
- Documented findings and the limits of the data for each chart.

Car Price Prediction

Python, pandas, NumPy, scikit-learn, pytest

- Built linear and polynomial regression models to predict car prices from vehicle features.
- Organised the code into a modular src/ structure so data loading, cleaning and modelling can be tested separately.

- Wrote 14 pytest tests and debugged 7 failures, including true/false values being treated as numbers, until all 14 passed.
- Added validation that rejects invalid inputs such as invalid prices or horsepower values.

TECHNICAL SKILLS

- Languages: Python, JavaScript, SQL, HTML, CSS
- Frameworks and libraries: React, Django, Django REST Framework, pandas, NumPy, Matplotlib, scikit-learn
- APIs and databases: REST API design and validation, SQLite, Django ORM
- Testing and tools: pytest, Git, GitHub, VS Code, Jupyter
- Other: CRM automation (GoHighLevel), DNS and domain setup, AI chatbot configuration and testing

EDUCATION

A Levels

Bolton Sixth Form College, Bolton

- Mathematics (A), Further Mathematics (B), Art and Design (B) – 128 UCAS points

GCSEs

Eden Boys' School, Bolton

- Fine Art (9), Mathematics (8), Urdu (8), English Language (7), English Literature (7), Combined Science double award (7, 7)

CERTIFICATIONS

- IBM Full Stack Software Developer Professional Certificate
- Google AI Fundamentals

LANGUAGES

English
